ABSTRACTED-PUB-NO: DE 4234050A

BASIC-ABSTRACT:

The glass fibre light conductor, when installed in an auxiliary instrument and also in the corresp. hand grip, can be interrupted by a pin contact. The light outlet aperture is screened towards the observer at the end of the light conductor. Next to the light conductor a laser sonde can be installed in the instrument.

The glass fibre light conductor and the laser sonde can be fed through an additional handgrip on the auxiliary means or instrument.

USE/ADVANTAGE - Partic. in ENT medical practice and for fine mechanical work, to provide a light source at the point of investigation, processing and operation.

ABSTRACTED-PUB-NO: DE29718482U

BASIC-ABSTRACT:

A warning device for a bicycle with variable patterns that is easily installed on the wheel spokes has a substrate (3) with a number of lamps (32), a group being illuminated for a prearranged pattern. A housing has an upper and lower part (1,2) with at least two grooves(111, 112) at suitable positions, a centrifugally controlled switch inside the housing, a fastener for the housing to the wheel, whereby the switch can be triggered to supply the substrate by the wheel's rotation.

Therefore a certain group of lamps can be illuminated according to a preset mode giving a pattern recognised by the transitional perception of a human being. The substrate also has an integrated circuit.

ADVANTAGE - The warning device has variable patterns.
